### CONTEXT

SERVICES AND PRODUCTS NEWS AND UPDATES CORPORATE INFORMATION DESIGN AND BUILDING TIPS

effects of massage as it enables each disc of our spine to individually separate and decompress, allowing nutrients to enter disc tissue.

### **Next Generation Air Massage Technology**

The airbag massagers have been upgraded and engineered, reducing the number of airbags and valves but at the same time increasing the surface coverage. Less power is consumed and runs more quietly with the reduction of air pumps and valves, allowing for a more tranquil massage experience. The material used to create the air bags have also been modified with industrial grade material for durability but yet soft and pliable to provide comfort and consistency.

### Arm Air Massagers

The **new industrial design** made the arm part move along with recline upto 3.9" to a suitable position.

### Foot and Calf Massage

There are multiple air bags along the sides and back of the legs and feet which inflate to apply a **compression massage**. Located along the bottom foot massager are 2 pressure point nodes. When the air bags inflate, the foot and calves are firmly pressed down on the pressure points for an invigorating massage. The experience is simulates a massage therapist pressing down with their thumbs.

Located on the bottom of the feet is single row of spinning reflexology massagers which provide a soothing kneading style application. As the rollers spin it will stimulate acupuncture points and as the air bags inflate it will generate a much deeper massage along the bottoms of your feet.

### Shoulder Airbag Massage

The outer and top part of the shoulders have not been forgotten. Airbags have been placed on both sides of the chair. As the airbags inflate the shoulders pressed inwards and back pinning your shoulders the backrest. This will stretch out muscles in the shoulder region where most carry their tension.

**Lumbar Heat Therapy**There are 2 heating pads, one on each side in the lumbar area. The heat therapy is a great compliment to roller and airbag massage. The heating pad is not intended to be use for more than 30 minutes a day or the duration of a massage preset program.

### Seat Vibration

Osaki has taken one step further to enhance your massage experience. The 3rd dimension added is **vibration massage**. On the seat a hi frequency vibration massage plate has been added to massage the back portion of user's upper legs. The vibration is soothing and effective.

### Intensity Control

The intensity of the airbags can be controlled 5 levels along 5 different speeds for the massage heads. On the remote tap the "intensity" and the "strength" button to make the adjustments.

### Easy-To-Use Remote

The Osaki OS-3700 remote boasts to easily visualize what functions the chair has activated. The remote allows you to select the massage type, intensity, speed and location. The manual mode massage includes kneading, tapping, shiatsu & rolling. Also you can select dual massage actions of kneading and tapping, or kneading and

- Air intensity adjustment The air intensity of the air bags can be controlled up to 5 Massage speed control - The speed in which the massage heads move can be
- controlled up to 5 different speeds, ranging from slow to fast.

### 6 Pre-Set Programs

Enjoy from 6 preset programs of massages. Every one of the preset pgrams are unique, each offering a different focus of massage style. Some my focus on more the kneading and other on the tapping. The intensity of the massage will also vary from program. There is Deep Tissue, Body Stretch, Calm, Full Air, Calves Air and Arms Air.
