Zero Gravity Design

Most ergonomically correct reclining position, taking virtually all the burden of gravity off your spine. It cradles you like a baby and leaves you feeling weightless and deeply relaxed.

The benefits of the zero gravity position include:

- Helps Back Pressure relief
- Helps reduction of Muscle Tension
- Helps Correct Spinal Alignment
- Helps Expand Lung Capacity
- Helps Decrease Stress on Heart

Truly Ergonomic S-track

The Osaki OS-4000 Zero Gravity massage chair is ergonomically designed with the shape and curvature of the human spine in mind.

- It provides support to both your neck and back, especially the lumbar area.
- This position increases the effects of the massage

Comprehensive Hand-like Massage

- Using twin rollers to mimic the feeling of the human thumb, thereby enhancing the massage experience.
- The width of the rollers can be adjusted and customized.

Computer Body Scan

Equipped with the latest technology, it allows for the rollers to map the back curvature with even more accuracy, which translates into a more precise massage hitting all the key areas. Regardless of your body type, this highly advanced chair will self-adjust making each massage experience feel customized.

Unique Foot Roller

Located on the bottom of the feet are 2 rows of spinning reflexology massagers which provide a soothing kneading style application. As the rollers spin it will stimulate acupuncture points and as the air bags inflate it will generate a much deeper massage along the bottoms of your feet.

Zero Gravity Massage

Inspired by NASA technology, the **Zero gravity position** is the perfect position to enjoy a massage, aligning your back relative to your thigh at an optimal level of comfort. When reclined into the zero gravity position, the complete weight of your back is virtually supported by the backrest which maximizes the intensity of the massage. This feature improves spinal decompression and decreases muscle tension of the spine. There are 2 stages of zero gravity, the 2nd being more reclined. When reclined fully, to where your legs are higher than your heart level, the therapeutic effects are incredibly effective and may be felt immediately.

Next Generation Air Massage Technology

Osaki OS-4000T has re-engineered and has developed the next generation of air massage technology, streamlining the air massager to a lower count. Through innovative engineering, we have reduced the total number of air bags but have increased the volume and surface area of massage. By doing so the total number of working valves has drastically reduced from prior model. Which ultimately puts less stress on the chair, making it one of the most mechanically sound massage chairs in the market.

Air Bag Position	Air Bag Quantity
Shoulder	2 pcs
Side Seat	6 pcs
Arm & Hand	8 pcs
Low back	2 pcs
Neck	3 pcs
Hip	3 pcs
Calves	8 pcs
Feet	6 pcs

Total 38 Air Bags

Arm air massagers

Along with mechanical advancement, the material has also made upgrades, such as the arm massaging area. Using a **durable spandex**, the bottom portion of the arm massager has been lined with small rubber bumps to **invigorate** the senses as the air bags compress the tops and bottom of the forearm and hands.

Auto recline and leg extension

This chair defines luxury, fully automatic to make every movement effortless. The simple to use remote control allows you to operate the **foot extension**, leg rest, recline of backrest, and the zero gravity position.

Wireless Controller

Located on the back of the main remote you will find a compact wireless remote allowing you to control the main features of the chair without having to struggle to reach the main remote in the reclined position.

Calf & Foot Massage

There are multiple air bags along the sides and back of the legs and feet which inflate to apply a compression massage. Located along the bottom foot massager are spinning rollers that apply a concentrated pin-point kneading massage.

Lower Back Heat therapy

Placed in the lower back region of the chair are **2 heating pads** that enhance the massage experience.

Shoulder, Lumbar & Hip Squeeze

In the upper to mid portion of the chair, the air bags are programmed to inflate at independent times, which causes the body to twist, creating an enjoyable deep stretch. Stretching is applied to the shoulders, lower back, hips and thighs.

Full Size Easy-to-Use Remote

The OS-4000 remote presents one of the largest viewing screens to easily visualize what functions the chair has activated. There is also a flip down cover to access the manual functions of the chair. The remote allows you to select the massage type, intensity, speed and location. **You can also independently select the area of airbag massage.** The manual mode massage includes **kneading, tapping, shiatsu, rolling, combination** and **Swedish**.

- **Air intensity adjustment** - The air intensity of the air bags can be controlled up to 5 levels, from mild to strong.
- **3 levels of intensity for the massage** - The roller heads that apply the massage to the back, can be extended outwards causing the rollers to press more firmly along the back. This will result in a more vigorous massage.
- **Massage speed control** - The speed in which the massage heads move can be controlled up to 3 different speeds, ranging from slow to fast.

Auto Leg Scan

The **calf and foot** massager is capable of making adjustments according to each individual's leg length ensuring that the massage air bags are concentrating on the correct areas. At the start of the massage, the chair will fully extend out and then retract. Once the foot massager has reached the desired length, firmly press your toes down to indicate to the chair to stop.

Seat Vibration

Located in the seat base is a vibration plate that provides a vibration massage to the back of the thighs.

Product Specification

Product Name	Osaki Os - 4000
Model No.	Os- 4000
Rated Voltage	110-120V
Rated Frequency	50/60 Hz
Main Body Dimension	52L x 31W x 34H (inch)
Vertical side	38L x 25W x 15H (inch)
Gross Weight	255 lbs *Net weight: 213lbs
Auto Timer	5/10/15/20/25/30 minutes
Length of the wire	*Controller wire: 1.2m Power supply wire: 2.1m
