Stressless® Sky

Nordic Nights, Better Days

Introducing the Stressless® Sky mattress – a testament to Nordic heritage and quality craftsmanship. The Nordic way of life is all about finding harmony with nature and promoting good health. The Stressless® Sky mattress is designed to provide a restful night's sleep, and give you the energy to take on the day. Made in Norway with quality components, our dedication to quality craftsmanship is evident in every detail of the Stressless® Sky. Our goal is to provide a long-lasting and restful sleep experience for our customers. Embrace the Nordic way of life and enjoy better days ahead with the Stressless® Sky mattress.

80 years of sleep expertise

With over 80 years of experience in the mattress industry, Ekornes is excited to bring its proprietary and innovative comfort components to the American market with the Stressless® Sky. Our designs are based on decades of research on sleep comfort, and have won the hearts and dreams of Nordic customers since 1937.

Our in-house expertise is now combined with the legendary Stressless® brand, to make what we believe will become a new standard in sleep comfort.

Ekornes, the manufacturer behind the Stressless® brand, is based in the municipality of Sykkylven, Norway – below the mountains, by the fjords.

At Stressless® we pride ourselves on making quality products that will last a lifetime. With the highest quality materials, expert craftmanship and custom design, we allow you to personalize your Stressless® product.

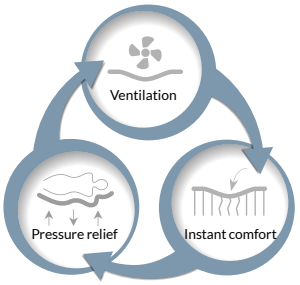

Better sleep is an investment in health

Did you ever stop to think that sleep is just as important for your health as food and fresh air? Quality sleep can improve memory, reduce stress levels, and boost immune function. Investing in a good night's sleep is one of the most important decisions you can make for your health and well-being.

Your body is an amazing instrument with the ability of sleep adjustment. If the body is disturbed, you wake up. Our most important task is to create good conditions for uninterrupted sleep throughout the night. We have learned that the ideal sleeping conditions depend on a balanced combination of support, pressure relief and ventilation, maintained through all the phases of sleep. The Stressless® Sky mattress is designed to provide unparalleled comfort and support, allowing you to wake up feeling refreshed and rejuvenated.

The Sleep circle – providing optimal sleep

Optimal support and pressure relief

The Stressless® Sky mattress is built to cradle your shoulders and hips and provides the optimal starting point for a natural sleeping position. The mattress provides excellent support for spine alignment, which is essential for a comfortable and restful night's sleep. Without good support, your spine may be forced into an unnatural position, leading to aches and pains throughout the body.

Ventilation

The body's temperature naturally drops as you sleep, which helps initiate and maintain sleep. If the ambient temperature is too high or too low, it can interfere with this process, resulting in poor sleep quality and a disrupted sleep cycle. Thanks to its excellent ventilation properties, the Stressless® Sky mattress helps to maintain a comfortable sleeping environment.

Instant comfort

Stressless® Sky instantly adapts to your body when you lie down, providing just the right amount of support. In combination with high quality upholstery foam and pocket springs divided in five comfort zones, it provides an unparalleled sleeping experience regardless of size, shape or weight.

AdaptiveZone™ spring system

For optimum support and pressure relief

The Stressless® Sky mattress easily adapts to your individual needs, thanks to its innovative AdaptiveZone™ pocket springs and NordicSoft™ foam. All the layers in the mattress are carefully calibrated to provide perfect sleep comfort and quality, regardless of body shape and comfort preferences. The support layer is made with high quality individual springs for perfect spine alignment.

The AdaptiveZone™ pocket spring system is made from barrel-shaped pocket spring coils. The spring coils are wrapped up one and one in a soft pocket material so each spring coil can work individually to adapt to your body shape and give the best possible support and pressure relief.

The innovative AdaptiveZone™ spring unit optimizes the support for your shoulders, your lumbar area, your hips, thighs and legs. Each spring coil works individually, adapting to your body shape and offering the best possible support and pressure relief – regardless of body shape and weight. There are three firmness levels in the inductive pocket spring coils which are strategically placed to create five support zones in the mattress. This clever zone system provides excellent support for spine alignment while cradling your shoulders and hips.

1. Cloud layer
2. Plush layer
3. Support layer

Concept overview

The Stressless® Sky mattress is built up of three layers comprising the support layer, plush layer and the cloud layer.

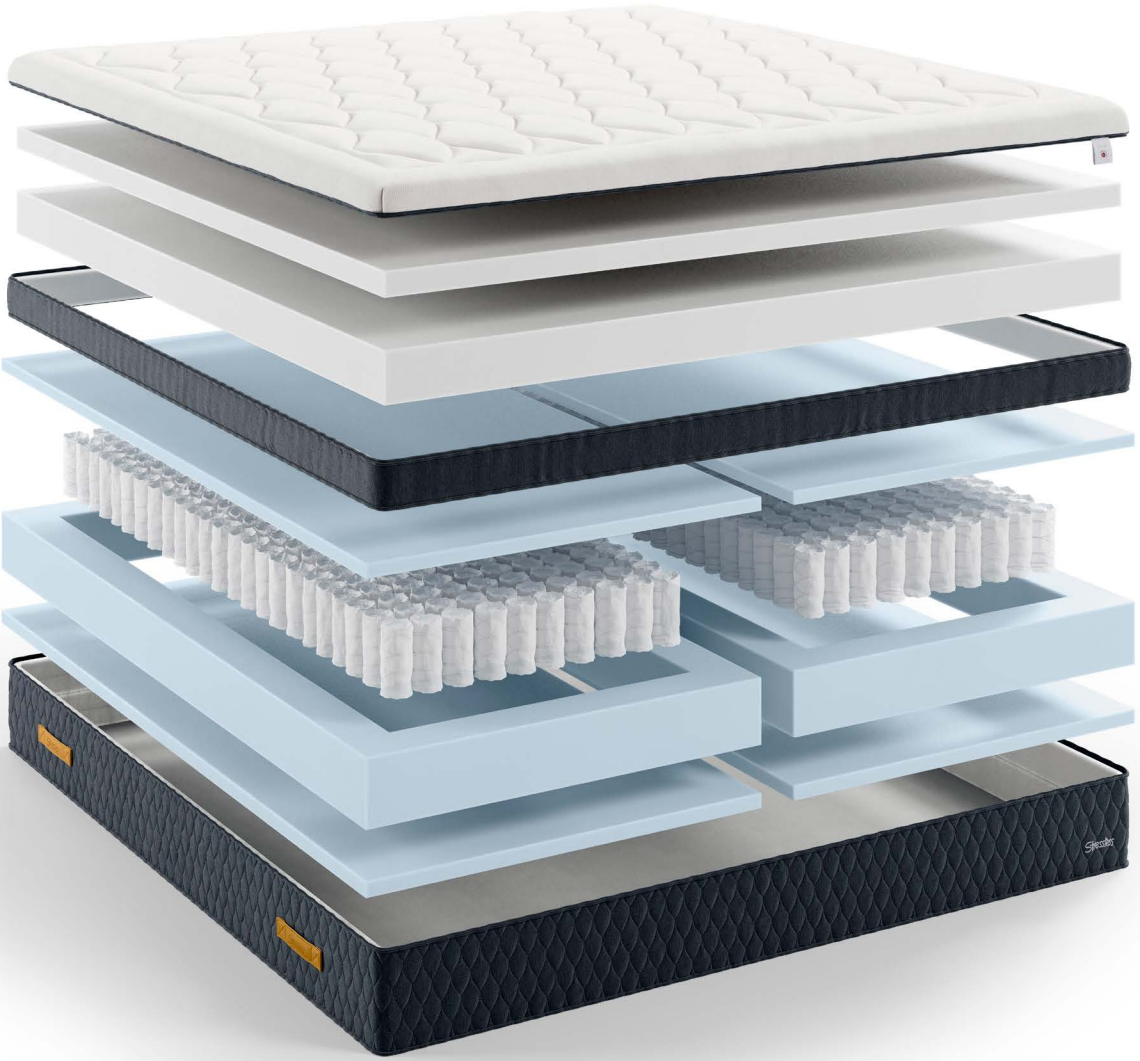

1. The cloud layer is a triple viscose infused layer for excellent moisture management and a cooling effect. The elastic material enhances the softness of the NordicSoft™ foam, adapting to the body contours for an instantly comfortable sleep surface.
2. The Plush layer is an optional layer for those who would like to indulge in extra plush and embracing sleep comfort. This is obtained through a generous layer of our NordicSoft™ foam, reinforcing the feeling of weightlessness and instant comfort. The open structure lets air and moisture travel through.
3. The Support layer is equipped with high-quality pocket springs with AdaptiveZones™ that provide excellent support for spine alignment while cradling your shoulders and hips. The spring unit is enveloped in a layer of our elastic and supportive in-house developed foam.

NordicSoft™ foam – Temperature regulating and hygienic

The body's temperature naturally drops as you sleep, which helps initiate and maintain sleep. If the ambient temperature is too high or too low, it can interfere with this process. Thanks to its excellent temperature regulation, the Stressless® Sky mattress helps to maintain a comfortable sleeping environment.

To support the ventilating properties of the mattress we have developed special materials which allow the moisture to travel through the mattress. The foam softness is almost fully neutral to moisture and heat. This is extremely important to maintain the best possible performance of the mattress through the night. With good ventilation and temperature regulation you will not only sleep better but also have a more hygienic mattress.

Treat yourself to luxurious comfort

By choosing the Stressless® Sky mattress, you are investing in your long-term health and ensuring that you have the energy and focus to take on the day ahead. The Stressless® Sky mattress can be purchased with an extra Plush layer to elevate your comfort. Experience the same luxurious comfort that you know and love from the legendary Stressless® recliners, now in a mattress form.

Stressless® Sky – a modular mattress system

Our modular system allows you to customize your comfort with layers of plush padding, foam and pockets springs, ensuring you get the support you need to start your day feeling refreshed. The different layers are cleverly zipped together, allowing both personalization of comfort and easy transport.
